Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 February 2003 and 06 March 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/26/03 has been entered.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 25 recites the limitation "the horizontal runners" in line 4. There is insufficient antecedent basis for this limitation in the claim.

Claim Objections

4. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 25-27, 30-33 been renumbered 26-28, 33-36, since applicant cancelled renumbered claims 29-32.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 26-28, and 33-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Payne (US 5,735,639) in view of Bowers (US 3,605,350).

Payne teaches the module structure comprising a plural rectangular frame members 130, 132 each rectangular frame member having a plurality of frame members with a long, and short sides and running parallel to each other, horizontal runner 312, sheeting members 36-44 to the frame structure members for forming an enclosure 30, four external corner 282. Each of the rectangular frame members is formed by interconnecting four individual frame sections (fig. 8), and inherently made by light steel material, C-shaped cross-section 334 (see figs. 6-7). The module structures are stack-up side-by-side, and one on top of another (figs. 20-21).

Payne does not teach expressly the frame members with a plurality of horizontal runners parallel to each other and with a second predetermined spacing between each adjacent pair of runners to form a lattice framework. Bowers teaches the modular housing structure comprises frame members having a plurality of horizontal runners 28 spacing, parallel to each other (see fig. 3). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Payne with Bowers for

the plurality of horizontal runners secured to the frame members. The motivation for doing so would have been to provide more rigidity and stronger for the frame structure. Payne and Bowers teach the structural elements for the building module except for the method of assembly, examiner considers this to be the obvious method of setting up the device of claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Payne (US 6,155,747), Sanford (US 6,179,522) teach the structural frame for module.
